

**AMENDMENTS TO THE CLAIMS**

Claims 1-5 (Canceled)

Claim 6 (Currently Amended)      A processing plant for handling combustible fluids, comprising:  
a processing section operable to process combustible fluids;  
a gas valve connected with said processing section operable to relieve gas pressure from said  
processing section by conducting surplus or residual gas from said processing section;  
a collection line connected with said gas valve, said gas valve being operable to conduct the  
gas from said processing section to said collection line;  
at least one low-pressure store, said collection line being connected to said at least one low-  
pressure store such that the gas from said processing section is conducted to said at least one low-  
pressure store; and  
at least one second line connected to said at least one low-pressure store operable to conduct  
fluid from said at least one low-pressure store;  
The processing plant of claim 5, wherein:  
said processing section is operable to separate gaseous hydrocarbons from oil; and  
said at least one low-pressure store comprises a crude oil store upstream of said processing  
section.

Claim 7 (Canceled)

Claim 8 (Currently Amended)      A processing plant for handling combustible fluids, comprising:  
a processing section operable to process combustible fluids;  
a gas valve connected with said processing section operable to relieve gas pressure from said  
processing section by conducting surplus or residual gas from said processing section;  
a collection line connected with said gas valve, said gas valve being operable to conduct the  
gas from said processing section to said collection line;

at least one low-pressure store, said collection line being connected to said at least one low-pressure store such that the gas from said processing section is conducted to said at least one low-pressure store; and

at least one second line connected to said at least one low-pressure store operable to conduct fluid from said at least one low-pressure store;

The processing plant of claim 5, wherein said at least one low-pressure store comprises a raw product store upstream of said processing section, said raw product store includes a gas area, and said at least one second line comprises a return line connected between said gas area and said processing section and a raw product line between said at least one low-pressure store and said processing section, such that any condensed gas and liquid from fluid added to said at least one low-pressure store through said collection line can be returned to said processing section.

Claim 9 (Previously Presented)      The processing plant of claim 8, wherein a fan or compressor is provided in said return line.

Claim 10 (Currently Amended)      A processing plant for handling combustible fluids, comprising:  
a processing section operable to process combustible fluids;  
a gas valve connected with said processing section operable to relieve gas pressure from said processing section by conducting surplus or residual gas from said processing section;  
a collection line connected with said gas valve, said gas valve being operable to conduct the gas from said processing section to said collection line;  
at least one low-pressure store, said collection line being connected to said at least one low-pressure store such that the gas from said processing section is conducted to said at least one low-pressure store; and

at least one second line connected to said at least one low-pressure store operable to conduct fluid from said at least one low-pressure store;

The processing plant of claim 5, wherein said collection line is not connected with a flare tower.

## Claims 11-13 (Canceled)

Claim 14 (Currently Amended)      A processing method for handling combustible fluids, comprising:

processing combustible fluids in a processing section;

relieving gas pressure from said processing section by conducting surplus or residual gas from said processing section using a gas valve connected with said processing section;

conducting the gas from said processing section to a collection line connected with said gas valve;

conducting the gas from said processing section to at least one low-pressure store with the collection line, the collection line also being connected to said at least one low-pressure store; and

conducting fluid from said at least one low-pressure store with at least one second line connected to said at least one low-pressure store;

The processing method of claim 14, wherein said at least one low-pressure store comprises a raw product store upstream of said processing section, said raw product store includes a gas area, and said at least one second line comprises a return line connected between said gas area and said processing section and a raw product line between said at least one low-pressure store and said processing section, and further comprising returning any condensed gas and liquid from fluid added to said at least one low-pressure store through said collection line to said processing section.

Claim 15 (Previously Presented)      The processing method of claim 14, wherein a fan or compressor is provided in said return line.

Claim 16 (Previously Presented)      The processing method of claim 14, wherein said collection line is not connected with a flare tower.
